# Project Plan 3

Kelly Brichta

Project 3: Create an Android helper app that uses user input to help the user in some way. This *help* can be making a suggestion, doing a calculation, providing information, or answering some question. The user input can be any type of interaction with the UI. I'm defining this very broadly, so be creative and have fun with this!

Description

For this project, I am going to help users find the best educator on the Sympto-Thermal Method of fertility awareness (FAM or NFP). They will input information such as their location in Colorado, how they plan to use the Fertility Awareness Method, their sex, their gender, and how they learn best.

Sketch

Pseudo code

User Input:

Where do you live nearest?
    Boulder
    Denver
    Western Slope

How do you plan to use the Sympto-Thermal Method?
    To achieve pregnancy
    To avoid pregnancy
    For Health
    For body literacy

What is your sex?
    Female
    Male

What is your gender?
    Woman
    Man
    Lesbian
    Gay
    Bisexual
    Transsexual
    Queer
    Asexual

Are you Catholic?
    Yes
    No

How do you learn best?
    One-on-one (in person)
    One-on-one (online)
    In small groups
    Reading

After User Input, user is directed to a new page with the result of their choices displayed and a link to their recommended Educator.

Each page will have 2 Educators to choose from and links to their profiles.
